

1. Requirement

- JDK 1.8.0_171
- Gradle 4.5.1

2. Installation

- Unzip source code
- gradle build

3. Running Server

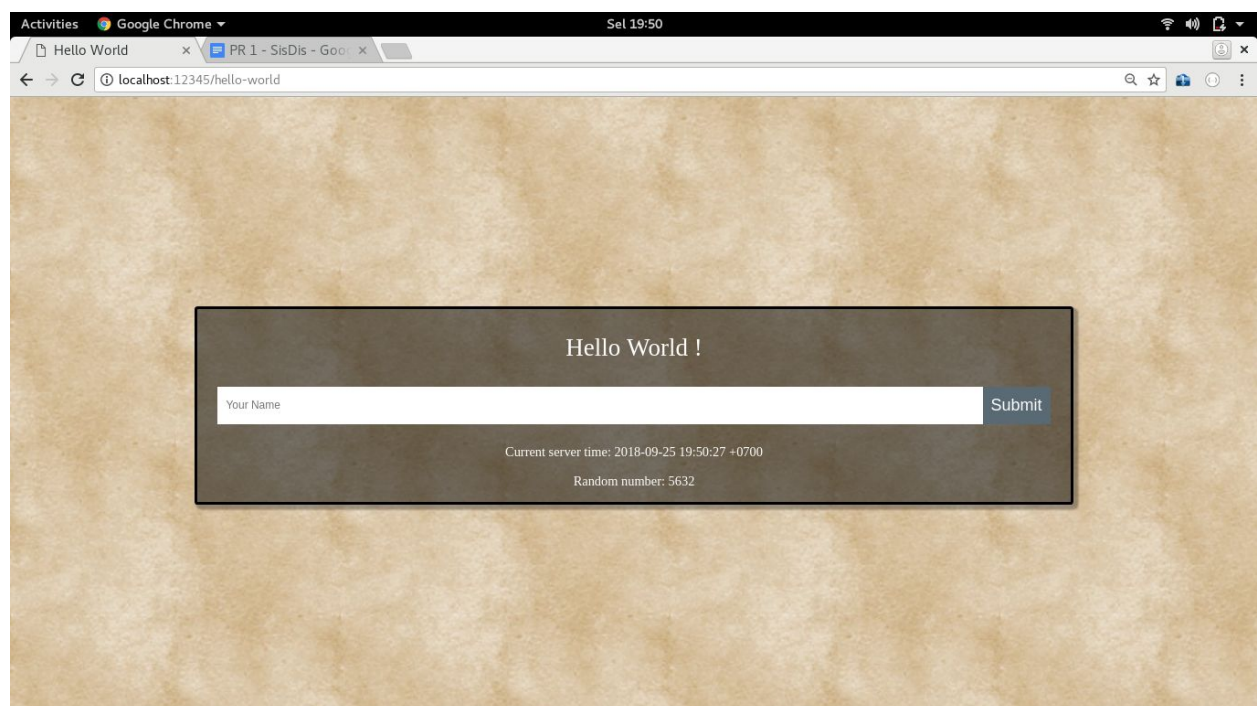

- gradle run (port default 12345)
- Jika ingin menggunakan port custom gradle run -Pport=port_number
- Buka client browser atau curl, buka link localhost:port_number ex:
localhost:12345

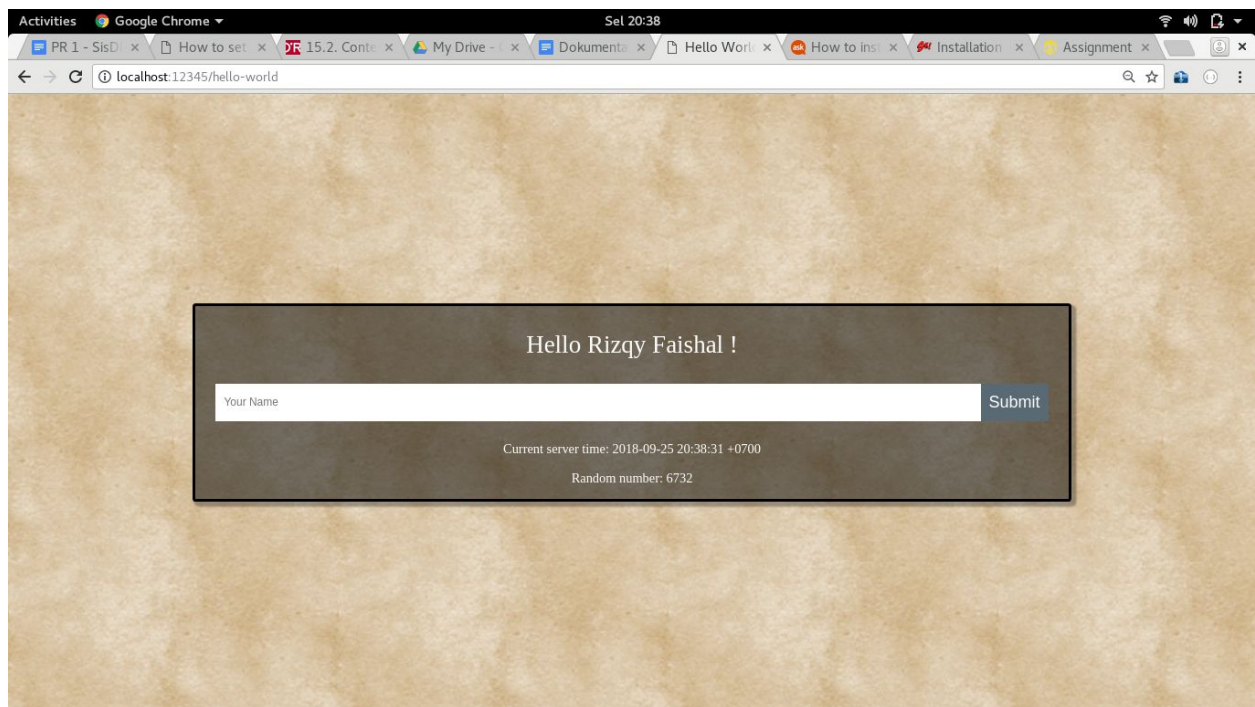

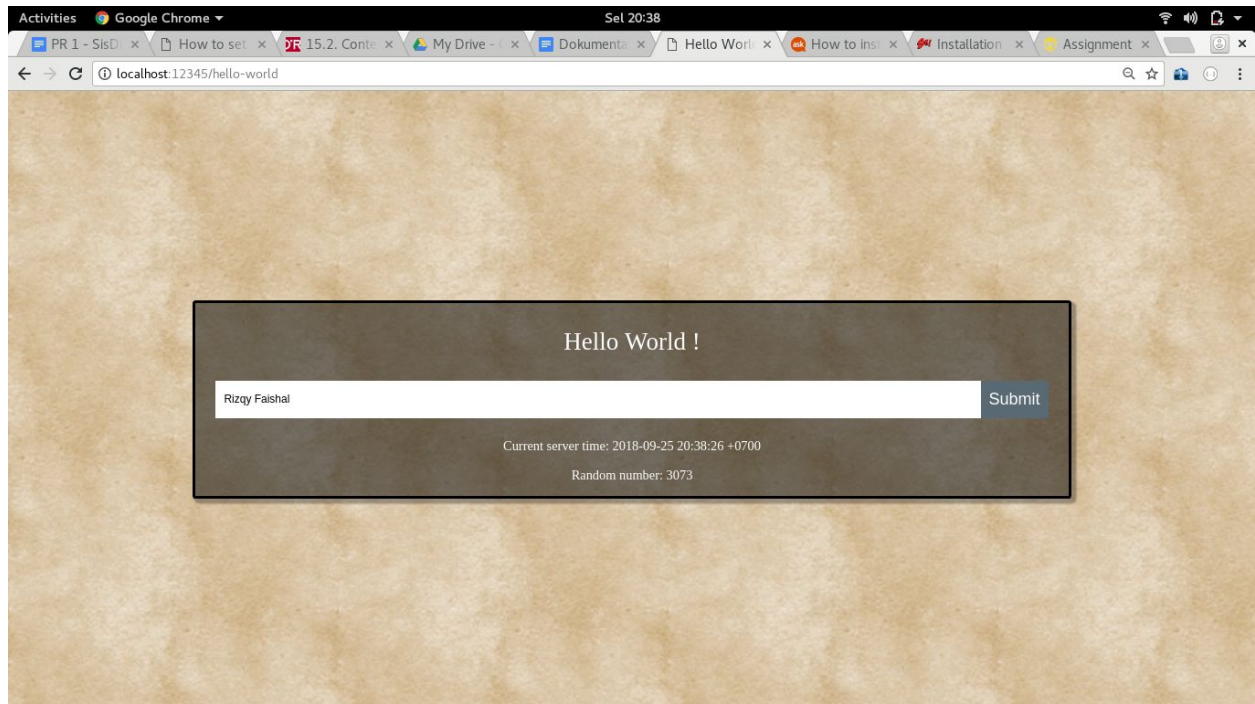

```
rizqy@rizqyfaishal:~$ curl localhost:12345/info?type=randoma -v
* Trying 127.0.0.1...
* TCP_NODELAY set
* Connected to localhost (127.0.0.1) port 12345 (#0)
> GET /info?type=randoma HTTP/1.1
> Host: localhost:12345
> User-Agent: curl/7.55.1
> Accept: */*
>

```

Hal-hal yang dipelajari dalam pembuatan server ini:

- Mengerti bagaimana header HTTP bekerja dan berbagai formatnya
- Mengerti bagaimana sebenarnya cara kerja alur data dari socket sampai bisa di proses menjadi data text, lalu di kembalikan response ke browser
- Mengerti cara menggunakan curl

- Mengerti kesalahan yang terjadi ketika menggunakan resource yang sama dalam multi thread, solusinya: melakukan cloning resource
- Mengerti arti dari content-type HTTP header
